.....

Configurable storage system that can be designed to suit your needs.

MODULAR VAN RACKING

For the ultimate storage solution, combine traditional steel units with our lightweight alternative.

The modular units are available in a variety of sizes and can be arranged in a format that is right for your business to maximise the space in your vehicle.

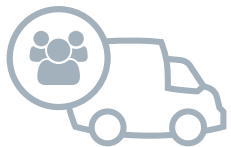

Made from steel, this durable racking option can withstand heavy use in tough environments. You can expect to re-use this racking over multiple life cycles of a van saving you money in the long term.

The modular system from Cartwright is also available in a lightweight aluminium alloy.

It weighs up to 30% less than traditional steel racking so you can maximise the payload in your van without compromising on load space. For the ultimate storage solution combine traditional steel units with this lightweight alternative.

Optimise your work space with a range of accessories including a hydraulic ladder rack. One of the safest and easiest to use on the market, our ladder rack can be operated from the ground by a single person.

Mobile racking is crash-tested to European standards for your peace of mind.
